

# AGRI CHAIN

COBIOLUBE®

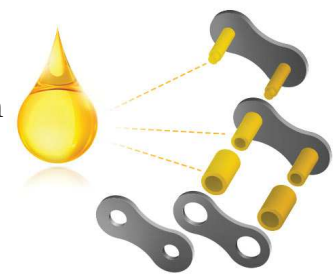

## Keep on rollin'

**Cobiolube® Agri Chain** is a new generation of bio lubricant for the agricultural industry. It has been developed for the lubrication of the heavy chain, like the one found in the roundballer machines. **Cobiolube® Agri Chain** shows outstanding performance, reduces your maintenance needs and increases significantly the lifetime of your equipment. **Cobiolube® Agri Chain** is compatible with both automatic and manual lubrication systems. It does not collect dust or dry grass, thus not creating any risk of fire.

### PROPERTIES / BENEFITS

- › Lubricity properties outstanding even in the higher speeds of the chain
- › Keeping the machinery clean, decreasing need for maintenance
- › Excellent anti-wear properties and corrosion resistance
- › Lesser amounts consumed (compared to mineral oil)
- › Environmental friendly and cost effective
- › Does not spray out, neither dry inside the pipeline

**Structure of the roller chain:** The most important task is to act as a lubricant at the surface of the pin, between the bushings and the roller. The extra oil at the surface of the chain does not collect any dust.

› Density at 20 °C 1150 kg/m <sup>3</sup>	› Viscosity Index ≈ 111
› Viscosity at 24,9 °C ≈ 280 - 320 cP	› Biodegradability >99,9%

Cobiolube® Agri Chain has been awarded with European Union's Ecolabel emblem. This emblem is given only to products that are able to lighten the environmental footprint throughout their lifecycle – from raw materials all the way to manufacturing, usage and disposal. The high quality is ensured with independent tests, where the candidate products have to be able to meet the performance level of the respective market leader
